SUMMARY

React.js Frontend Developer with production experience building eCommerce and production-grade web applications using React, Next.js, and TypeScript. Proficient in Zustand, React Query, React Hook Form, and Zod — with a focus on type safety and scalable component architecture.

EXPERIENCE

Frontend Developer | Smartive Media | Remote

03/2024 – 08/2024

Contributed to two eCommerce platforms: a merchant dashboard and a client-facing storefront — across UI architecture, form systems, and API integration.

- **Engineered a dynamic multi-tenant theming system** using HSL-based CSS variables controlled via JavaScript—a single hue value automatically propagated across all color scales per merchant, enabling fully customized storefronts without per-tenant stylesheet overrides.
- **Built complex multi-step and conditional forms** using React Hook Form and Zod, handling dynamic field visibility, file uploads, and cross-step validation schemas.
- **Established the Tailwind design token system** (colors, spacing, typography) from Figma specs, and composed shared UI components using shadcn/ui and Material UI as the foundation for the dashboard's component library.
- **Integrated REST APIs** using Redux Toolkit (Thunk) and React Query for async data flows, working within established Axios instance and global error-handling patterns.
- **Applied SSR and client/server component separation** in the Next.js storefront, isolating interactive components, reducing client-side JavaScript bundle by keeping server components as default

PROJECTS

Masjid ERP (In Progress) | [GitHub](#)

Stack: Next.js 15, TypeScript, MongoDB, Mongoose, Auth.js v5, React Hook Form, Zod, shadcn/ui, Tailwind CSS

A full-stack ERP SaaS designed for mosques and Quran centers to streamline their administrative operations.

- **Architected a multi-tenant ERP system** implementing role-based access control and secure authentication via Auth.js.
- **Designed a fully responsive, RTL Arabic dashboard** with Light/Dark mode support, utilizing Tailwind CSS and shadcn/ui for consistent and accessible UI components.
- **Engineered scalable database models** using Mongoose to track student attendance, group sessions, and teacher assignments across tenants.

Jobster | [Live Demo](#) · [GitHub](#)

Stack: React, TypeScript, Redux Toolkit, Styled Components, Recharts

A dynamic job application tracking dashboard designed to organize and streamline the job search process.

- **Fully typed Redux Thunk actions** — explicit generics for payload, argument, and rejection types across all async flows, eliminating unknown types throughout the state layer.
- **Library-free debounced search** — built with a memoized handler keeping local input state in sync immediately while delaying the Redux dispatch to minimize redundant API calls.
- **Exhaustive type-safe status system** — badge and card styles mapped via a typed record, forcing compilation failure if any job status is added without a corresponding style definition; chart colors connected directly to the theme via a theme hook for automatic palette consistency.

NextLevel Food | [Live Demo](#) · [GitHub](#)

Stack: Next.js 14, MongoDB, Cloudinary, CSS Modules

A modern full-stack food-sharing platform enabling users to explore and share recipes securely.

- **Server Actions for direct data mutations** — form submissions handled entirely on the server without an API layer, using `revalidatePath` to invalidate the Next.js cache immediately after each new meal is submitted.
- **Suspense-based streaming with built-in UI states** — page content streams progressively while data is fetched, with dedicated `loading.js`, `error.js`, and `not-found.js` handlers per route segment.
- **Server-side XSS sanitization and dynamic metadata** — user-generated content sanitized within the Server Action before storage, combined with `generateMetadata` for per-page dynamic SEO output.

SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3.
- **Frontend & UI:** React.js, Next.js (App Router), Tailwind CSS, shadcn/ui, Material UI.
- **State & Data:** Redux Toolkit, Zustand, React Query, Context API, Axios.
- **Forms:** React Hook Form, Zod.
- **Database & Auth:** MongoDB, Mongoose, Auth.js v5.
- **Tools:** Git, GitHub, Vite, Postman, Vercel, ESLint, Cloudinary.

EDUCATION

Bachelor of Agricultural Sciences | Al-Azhar University, Cairo, Egypt | 2018

LANGUAGE

Arabic: Native | **English:** Intermediate (Professional Reading & Writing)
